

I am a licensed Amateur Radio Operator (N1AOB) conducting much of my my activity in the CW mode. I am in strong agreement with the proceeding (RM-10352). I believe that the CW operators need a reasonable bandspace in which to operate. It is inappropriate to give away any more of the available space to other types of operation. I hope that this proceeding is strongly considered and carried out. There are many other amateur operators that feel the same way that I do. I communicate with many of them on a daily basis. I feel that CW is still a viable and important mode of communication and that it should be preserved for those of us that enjoy the mode.
